

How to install the GPS antenna

Rear spoiler is the best place for aftermarket GPS antenna installation (**fig. 1**) (cable length allows for it). If there is no rear spoiler in your car you can use a fin-shaped antenna (not included in the package) (**fig. 2**). You can also install antenna under the windshield, on or under the plastic panel (**fig. 1**).

-  When installing GPS antenna in a concealed position, make sure there is no metal above it.
-  Install GPS antenna with the magnetic base down (**fig. 3**)
-  If your car windshield and windows are made of thermal glass, fix GPS antenna on the roof or rear spoiler.
