

Dension Webradio

Firmware Release Notes

v2.0

The firmware version v2.0 brings the following new features:

- Support for stations streaming in WMA format
 - New directory and file layout, with bitrate selection available
 - Support for USB 3G modems
- For a compatibility list, check <http://www.dension.com/en/dension-webradio>

Firmware upgrade instructions:

1. Copy the "Webradio_update.den" file, contained in this zip package, to a USB Disk
2. Connect the Dension Webradio to a PC and insert the USB Disk into the USB connector of the Webradio (instead of the Bluetooth dongle)
Note: Do not try to perform the update with the Webradio connected to a hardware USB player, like the Gateway. Always do this with a PC.
3. During the update process, Webradio will begin flashing rapidly in blue
4. When the update is finished, Webradio will appear again as a removable disk drive on the PC. You can check the firmware version in the "start.html" file, located on the drive.
5. You will need to re-configure your Webradio with the Webradio Utility and re-sync your preset station list.

You can find a new release of the Webradio Utility and the Users Manual for the firmware v2.0 here: http://www.dension.com/en/downloads?field_file_product_nid=46
