

Fast and easy way to define if the GVIF is available in Toyota & Lexus vehicles

Start the engine and check the background of the multifunctional screen. If it is **gray** as seen on the [picture 1](#), your car uses analog **RGB** video signal and doesn't require [GVIF-interface](#).

Picture 1

If the background is the same as one on the [Picture 2](#), the car requires [GVIF-interface](#) to enable aftermarket connection of non-OEM video devices (Navigation, DVD, iPod etc.).
