

Handling the Servomotor

Orientation 1

The photo to the right shows the servomotor facing you. There are two shafts, the one with the wider space is the drive shaft and the one with the narrower space is the movable shaft.

so very slowly and gently. Excessive pressure when turning may cause damage to the servomotor.

 \star When turning the drive shaft by hand, do

2 Calibration and Setting Connector Numbers

Before building your robot, read 6. Using Servomotors in the Studuino Icon Programming Environment Guide (download from

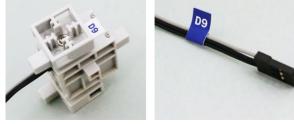

http://www.artec-kk.co.jp/robotist/) for instructions on how to calibrate your servomotor.

Building your robot without calibrating your servomotor may cause damage or improper functionality.

 \star Do not change the connector or the servomotor after calibration. Servomotor calibrations are unique to each servomotor.

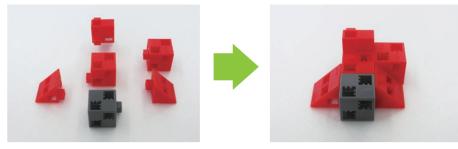

Attaching Number Stickers

After calibration, we recommend putting a sticker on the connector used for the servomotor so it can be easily identified.

① Assemble the blocks as shown in the picture.

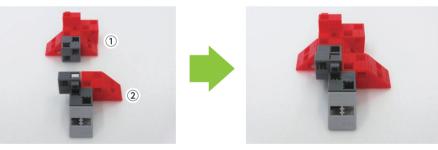

② Assemble the blocks as shown in the picture.

3 Assemble parts 2 and 1 as shown in the picture.

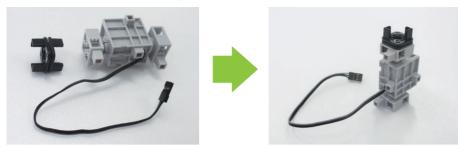

④ Add a servomotor to part ③ as shown in the picture.

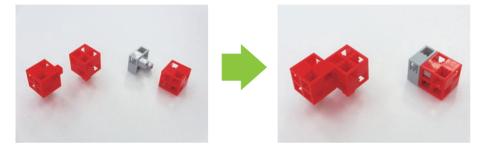

(5) Add the block shown in the picture to a servomotor.

6 Assemble the blocks as shown in the picture.

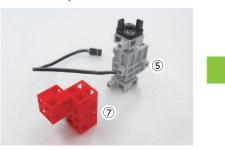

T Assemble the blocks from step G as shown in the picture.

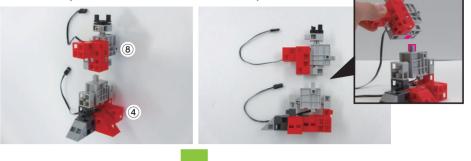

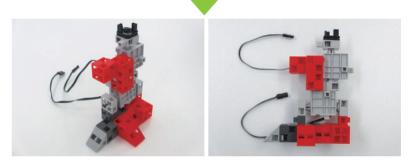

(8) Assemble parts (5) and \bigcirc as shown in the picture.

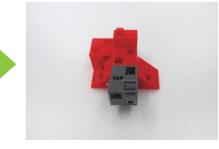

(9) Assemble parts (4) and (8) as shown in the picture.

10 Assemble the blocks as shown in the picture.

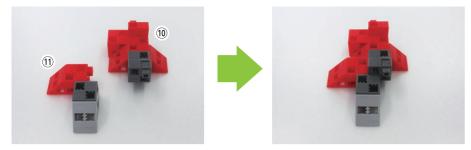

① Assemble the blocks as shown in the picture.

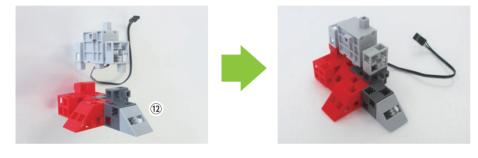

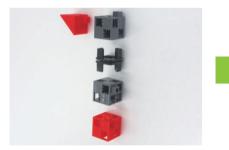

⁽¹⁾ Assemble parts ⁽¹⁾ and ⁽¹⁾ as shown in the picture.

(1) Add a servomotor to part (1) as shown in the picture.

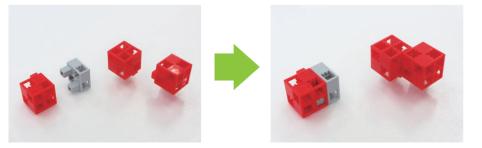

¹⁴ Assemble the blocks as shown in the picture.

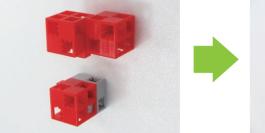

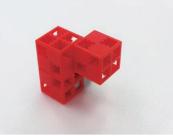

(5) Assemble the blocks as shown in the picture.

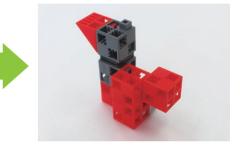

6 Assemble the blocks from step 5 as shown in the picture.

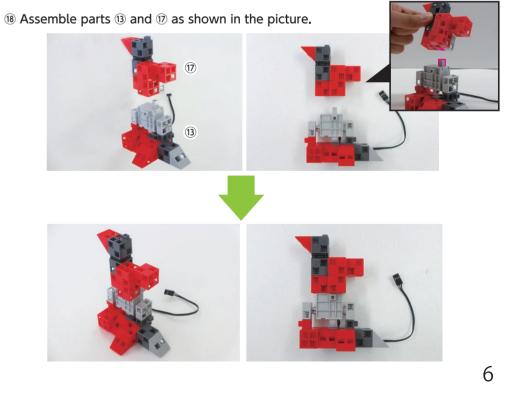

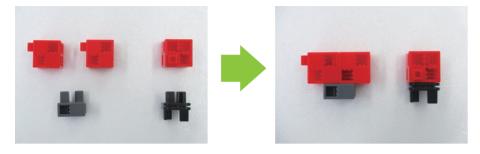

(1) Assemble parts (1) and (6) as shown in the picture.

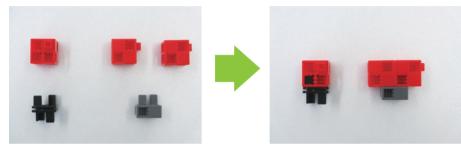

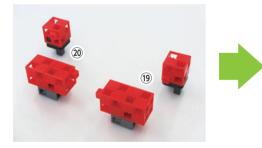

(19) Assemble the blocks as shown in the picture.

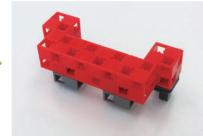

② Assemble the blocks as shown in the picture.

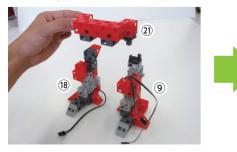

Assemble parts
 and
 as shown in the picture.

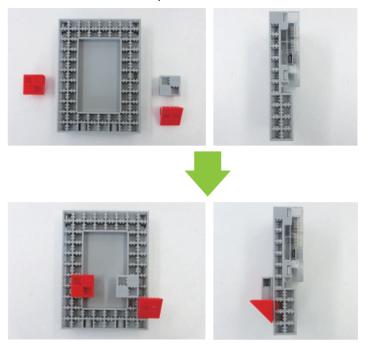

22 Attach parts (9) and (8) to part (2) as shown in the picture.

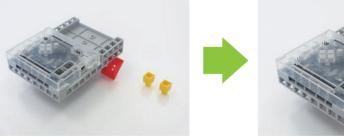

⁽²⁾ Add the blocks shown in the picture to the circuit board mount.

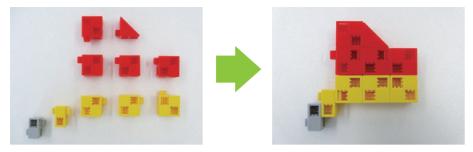

Assemble the blocks as shown in the picture.

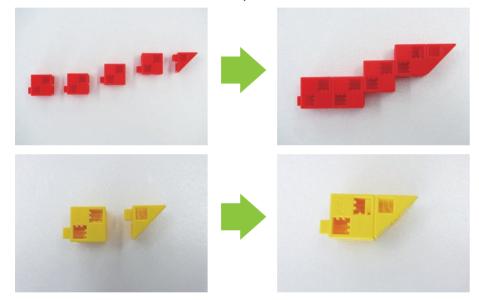

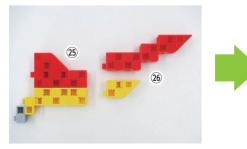

(2) Assemble the blocks as shown in the picture.

(26) Assemble the blocks as shown in the picture.

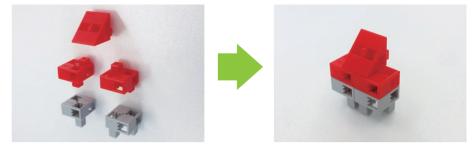

② Assemble parts ③ and ④ as shown in the picture.

⁽²⁸⁾ Assemble the blocks as shown in the picture.

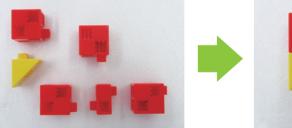

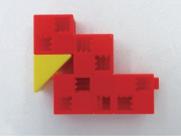

²⁹ Assemble the blocks as shown in the picture.

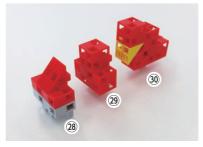

3 Assemble the blocks as shown in the picture.

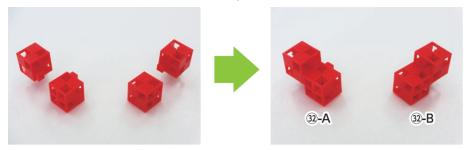

3) Assemble parts 28, 29 and 30 as shown in the picture.

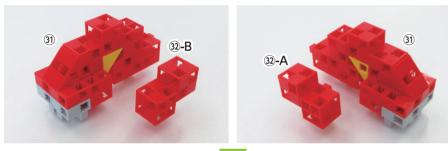

3 Assemble the blocks as shown in the picture.

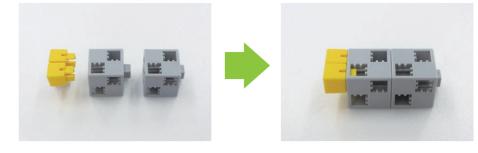

3 Add parts 3 - A and 3 - B to part 3.

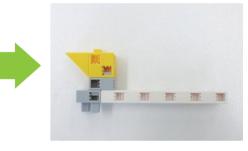

39 Assemble the blocks as shown in the picture.

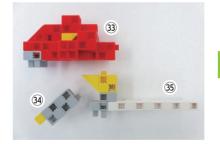

35 Assemble the blocks as shown in the picture.

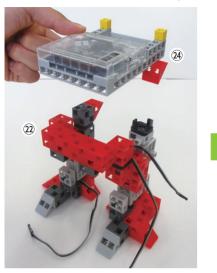

36 Add parts 34 and 35 to part 33.

3 Add the circuit board mount to parts 2 and 24.

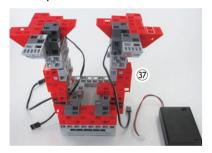

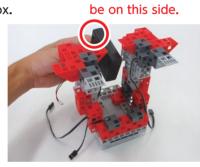

between the leg and the mount.

The two servomotor cables for the

left leg should pass through the gap

38 Turn part 37 over and insert the battery box.

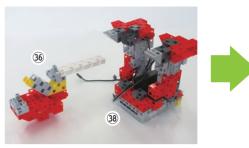

The switch should

39 Assemble parts 38 and 36 as shown below.

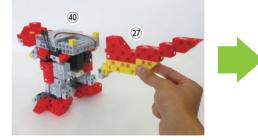

Plug the cables into your circuit board mount.
 Right leg servomotor
 Left leg servomotor (shorter)
 Left leg servomotor (longer)
 Battery box

unt. D10 D11 Power D9

Gray servomotor wires should face inward as shown.

(4) Attach part (2) to part (4) as shown.

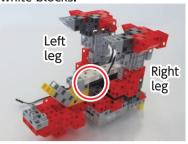

[Finished!] Turn the switch on and watch your robot move!

D11

The servomotor cables for the right leg should pass under the white blocks.

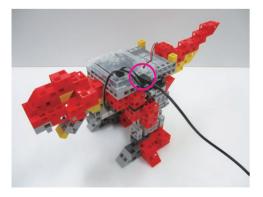

[Programming Your Robot]

Download your programming software from the Artec homepage at http://www.artec-kk.co.jp/studuino/download_en.html.

① Click on Start → Artec and open **Studuino Programming Environment.** Choose **Icon Programming Environment.**

② Use a USB cable to connect your circuit board mount to your PC.

③ Choose your port settings.

Tick the boxes for D9, D10, and D11 in the Port Settings dialog box.

DC Motor	r S	Gervor		Button

⑤ After sending the program to your circuit board, check that your robot is operating correctly by turning it on.

Having trouble?

- Check to make sure you've assembled your robot correctly.
- Make sure that the cables have been properly inserted.
- Read **6**. Using Servomotors in the Studuino Icon Programming Environment Guide (download from http://www.artec-kk.co.jp/artecrobo/) for instructions on how to calibrate your servomotor.
