Installation

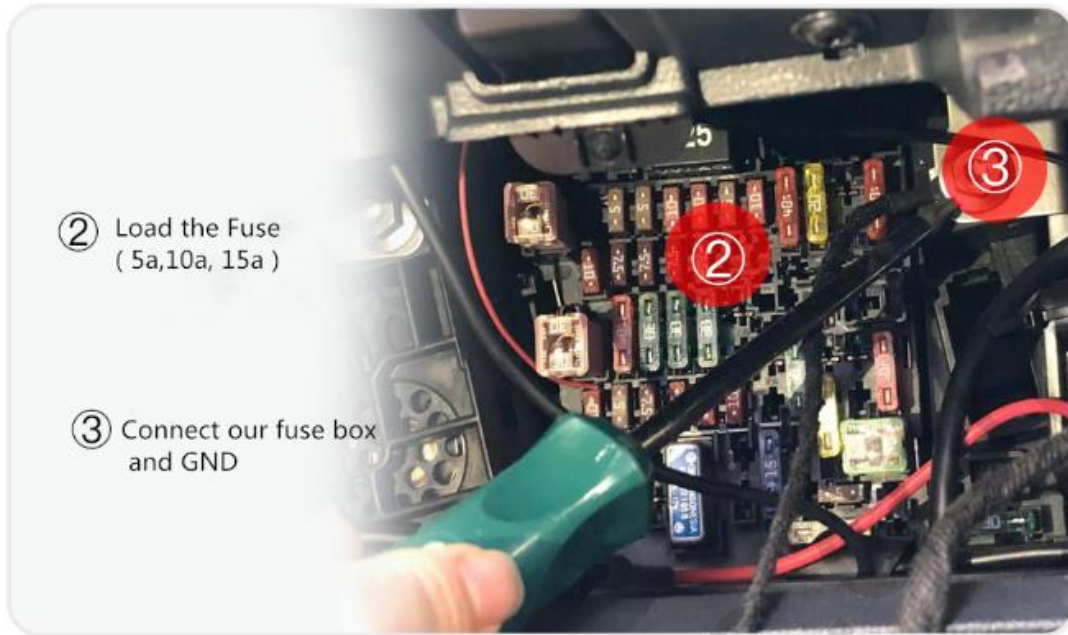

Step 1:

Step 2:

Step 3:

After Installation Testing

Check the GPS signal box, if Blue light always on, Green light flashing, means it works.

Note: Please read the contents below before using

- Make sure the original car radio has CarPlay function. After you connected to the USB port, please enter the original radio CarPlay APP. It will synchronize your Android system automatically
- Please change your hot spot password to 12345678, then connect Wi-Fi function if original car radio screen is not a touch screen
- During the first installation, there will be no audio, because the device need to match the car system. Please disconnect the cable or turn off car power and reconnect again to enable the audio
- The GPS signal box and antenna are not used for all car brands, some cars use original car GPS signal, contact your dealer for more details.
- The 3 virtual touch button on the left corner of main UI can be moved when using the third party Apps. Press the button and hold, then move to anywhere of the screen
- The big USB port on CP box is used for USB disk (music, video, upgrade) and mobile phone connection

Debugging: In case of any malfunctions, please check the options below first.
